These release notes pertain to the March 2014 Quarterly release of the CRSP US Stock and Index databases, shipped in April.

MARCH 2014 DATA EDITS

IMPROVEMENT IN TOTAL VALUE (TOTVAL) CALCULATION

A change has been made to fix a bug with the TOTVAL calculation used in CRSP Historical Indexes. In previous iterations, incorrect shares values were used in the calculation of TOTVAL in 29 cases. USDVAL was calculated correctly in all cases so those values have not changed.

VOLUME PRECISION

Our price vendor has changed the way it delivers its volume data. Beginning with this shipment of the March 2014 data, volumes will represent total number of shares traded with no rounding to the nearest 100.

FEBRUARY 2014 DATA EDITS

SHARES OUTSTANDING DATA REFINEMENT

In an effort to improve the quality of our shares outstanding data, we have initiated a project to review the total shares outstanding after a company has just completed an acquisition of another company and a stock distribution is part of the merger terms. Most cases can be resolved by making small changes to when the shares jump is applied in our database. There are over 1600 cases to be reviewed. We have been working through the list since the summer of 2013 and have made improvements to around 250 securities covering 2005-2013 so far. We plan on getting through the year 2000 by June 2014.

GROUP EDIT

BEGDT	ENDDT	DESCRIPTION
2005	2007	Reviewed shares outstanding for securities with acquisitions having stock distributions as part of their merger terms for 2005-2007. We used the merger terms to calculate how many additional shares are expected to be added due to the merger and made corrections to our shares outstanding values as needed on over 100 merger events.

DELIVERY

CRSP data delivery for all products is available through the "Cloud." By utilizing IPSwitch's MOVEit Cloud product (https://crsp.moveitcloud.com), you can download data products either on demand, or with scheduled processes.

If you are still receiving DVDs, you will be contacted by our business office so that we can set up a download account. The deadline for completion of the transition to on-line delivery is April 2014.

ZIP INSTALLS

CRSP uses a zip process for data installation. ZIP utilities that are standard on all platforms should work to unzip the databases. On Windows computers, CRSP recommends using 7-ZIP, which can be downloaded from this site: http://www.7-zip.org/

Several important items to note follow:

- All directories are extracted to lower case letters. For example: C:\crspdata\miz201308
- All Windows Users: Extracting a zipped file does not create an installed program in Windows. It will not show in the Windows Control Panel. When uninstalling the data, just delete the directories that contain the detailed files
- Red Hat Linux Users: If your version of Red Hat is earlier than 6.0, you will need to install an updated version of the "File Roller" program in order to install the data

ZIP FILE STRUCTURE AND PROCESS

The following tables include new and old naming conventions, and apply to both DVD and Cloud downloads.

STEPS TO INSTALL:

- From the drive containing the disk, right click (in Windows) or run File Roller (in Red Hat and Solaris)
- Set the extract destination to the current higher level directory where data is normally stored and unzip will add the rest of the path (default is C:\ in Windows or /home in Red Hat and Solaris)
- For example, in Windows, extracting to C:\ will install the data under C:\crspdata

Contact CRSP Client Services for assistance at: support@crsp.chicagobooth.edu or call 312-263-6400, Option 2.

SETTING ENVIRONMENT VARIABLES

The zip process will not automatically set environment variables for use with command line tools. The following steps will do so. Note: CRSPSift does not use and therefore does not require environment variables.

LINUX AND SUN SOLARIS

NOTE: The new zip installs are now saving to directories with lower case letters – for example, ~/crspdata/ diz201308

Check the current state of the environment variables by entering this command: env | grep crsp

- If you have admin privileges on your machine, open the .profile file, and make updates to the following lines to update the paths for the new data installed:
 - CRSP_DSTK=<full path name>/<daily stock directory> (example: CRSP_DSTK=~/crspdata/ diz201308)
 - CRSP_MSTK==<full path name>/<monthly stock directory> (example: CRSP_DSTK=~/crspdata/ miz201308)
 - CRSP_IND=<full path name>/<index directory> (example: CRSP_IND=~/crspdata/ifz201308)
- If you are using the bash shell (or any Bourne-style shell), enter the same commands above and export each one. This will make changes for your current session only and does not save to the .profile file.
- A shell script is available to make changes that can be reused for each update done. Note that this will only make changes to your current session and does not save to the .profile file.
 - Navigate to where the CUPL tools are loaded and then enter: cd accbin
 - Start the script by entering: ./crsp_setup.sh
 - The script will prompt for the following:
 - File name (will be appended with .kshrc)

- Top level directory (this should be where CUPL tools are located (*example: ~/crsp*)
- ° Scratch directory for error messages name can be anything
- Enter path for daily stock directory (example: ~/crspdata/diz201308)
- Enter path for monthly stock directory (*example:* ~/crspdata/miz201308)
- Enter path for index directory (*example*: ~/crspdata/ifz201308)
- ° Enter path for CCM directory enter to leave blank
- ° Enter path for CST directory enter to leave blank
- Execute script by running: . ./<file name created above>.kshrc (note there is a space between the two dots)

WINDOWS:

The CRSP Client Environment utility provides users a way to check the location of the software and to set environment variables. The utility can be started by locating it under installed programs CRSPAccess/CRSP Client Environment, or by navigating to the /accbin folder where the CUPL tools are installed and running: Client_Environment.exe (screen shot is displayed below). After making any changes, be sure to log off and back into Windows for the settings to be saved.

Note: For subscribers of the CRSP Compustat Merged database, additional CCM database environments will be displayed for the location of the Compustat data.

Q

A number of subscribers have requested flat-file versions of the CRSP databases that can be more easily consumed and built into automated processes. In response to these requests, CRSP is actively working on creating these flat-file versions, which once created, will also be available through the "MFT" delivery.
